

1. We **REMOVED ALL CARPET** on top of the slide-out floors and replaced with tile or solid surface material. We also kept our legacy, tried and true, in-house built electric slide-out system. Not only have we had years of engineering and production knowledge with our current electric slide system, we are also provided the benefit of not having to “steal” additional precious interior space like most other OEM’s who use hydraulic slides rooms which require wide vertical fascia trim to cover hydraulic arm mechanism.
2. Stunning decors, from top to bottom, with totally redesigned fascia, ceiling feature, new wall paneling colors, all wood panels now are hardwood veneer, cabinet door styling has changed, fashionable cabinet hardware, multiple tile selections, decorative lights and valances. These striking 2025 interiors are the best ones yet!
3. The SL (Superior Luxury) Freightliner Custom Chassis with 605HP and 1,950lb/ft. of torque now an optional chassis selection for all Cornerstones.
4. On the Spartan chassis only, we increased the fuel capacity from 150 to 175 gallons allowing fewer stops at the pump.
5. Now using the Victron MultiPlus II 120V 3000VA pure sine inverter system with its own 7” digital LED information screen. A true command center for user-friendly assistance while monitoring your electrical system on the coach. We removed all inverter/charger controls off the Firefly 10.1“ Polaris screen to streamline the information source.
6. Heating System 600D is now standard. The 600D brings 3 times the thermal storage and allows you to eliminate any diesel burn in normal usage conditions!
7. Powered headrests added to the completely redesigned theater seats for additional comfort. No matter what your height, you are going to love this added feature.
8. Water softener prep added on all floorplans. A basement thru-floor port aides in easier after-market customer installation.
9. A portable Shark vacuum replaced the stationary Dirt Devil System, allowing user flexibility within your coach.
10. We have added a basement electrical port, near the power switches and batteries, for those who also have the complementary Starlink remote system, too.

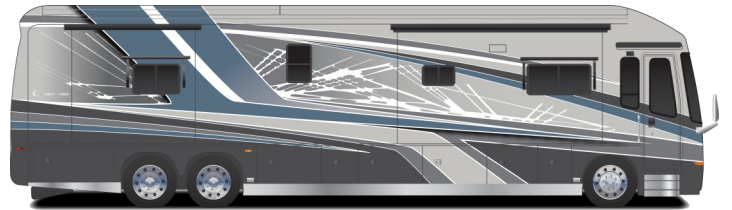

11. Updated the roof ventilation system to Airxcel Maxxfan roof vent system featuring a 12V fan with wall thermostat.
12. Increased the lighting in the entry stepwell to further assist your entry or exit of the coach
13. We have added driver-side DEF fill on the 45D and 45R floorplans. Driver-side DEF fill door has been recessed into rear fender for a more streamlined look.
14. Improved the air flow by adding venting to pantry and bunk cabinet doors.
15. Deleted the phone charging pad on driver-side console and added tilt and telescoping switches. We replaced the flat-facing phone charger with the faster charging USB port.
16. A customer feedback driven change was flip-flopping the cup holder with HVAC LED screen on passenger side console making it easier to use both features.
17. Updated the headlight switch from amber to white backlighting to match other switches within the cockpit.
18. The stackable Splendide washer and dryer has now replaced all Whirlpool washer and dryers in every floorplan.
19. Pat's Pillows featuring for the first time, hand selected, 800 fill power, Italian goose Cuddledown pillows. Another Industry first!
